

# DRIVER MANAGEMENT TRANSPORT & LOGISTICS

Chronicle Driver Management enables your organisation to track the individual driver training and refresher needs of all your employees no matter what class of vehicle they drive.

It encompasses all aspects of commercial and passenger vehicle driving compliance across your organisation to reduce risk to the public, the individual driver and your reputation. Used in the blue light sector for years, Chronicle is trusted by all British police forces as a training, refresher, planning, record keeping and compliance tool.

Chronicle generates notifications to inform personnel departments, supervisors and individuals when a skill is about to expire or when eyesight/medical test is due for renewal, ensuring staff remain current and able to meet operational requirements.

In the event of a collision or incident our system enables you to demonstrate that your employees are competent, authorised to drive and that your vehicles

have robust maintenance and compliance records.

Our web-based system is completely scalable to any size of operation, regardless of geographical spread. You can view data remotely on a mobile device or centrally. It can provide data directly into HR, duties and telematics systems already in place in your company – integrating seamlessly into existing business processes. Data entry processes make it easy and quick for users to input large quantities of data without double-keying.

We can also link to in-cab telematic features giving an holistic overview of individual driver behaviour to enable early intervention and targeted training.

All your records are in one place, easily input, easily searchable, easily auditable.

If desired, data input can be directly seen by other forces, collaborating partners and NPoCC at the click of a button, accurately informing central authorities' planning and response for major events, terrorist incidents or national disasters.

**//** *If your employee was involved in a serious collision, how confidently could you answer questions about their previous driving standards, prior collisions, near misses, assessment history, training and medical conditions? In the intense scrutiny of a vicarious liability court process, how could you prove your current recording keeping is credible, reliable and tamper-proof? **Chronicle is already proven to demonstrate professional competence and robust governance structure in post-collision enquiries.***

*"For most insurers it is not the risk of whether a fatal RTC will land on their desks; it is when such an incident will occur.... Get your IT records in order would be my best advice. If you have a computer based module, with the appropriate safeguards to prevent convenient changes of evidence, then you have a much better chance of successfully rebutting the allegations from the other side." Alan Scott-Davis LLB*
